FOUNDING AI ENGINEER ASSIGNMENT

Hello,

Given 30 chat messages from a user, build:

- A **memory extraction module** that identifies:
 1. User preferences
 2. User emotional patterns
 3. Facts worth remembering
- Create a “Personality Engine” that transforms the agent’s reply tone (e.g., calm mentor, witty friend, therapist-style)
- Show before/after personality response differences.

What we’ll be looking for

- Reasoning and prompt design
- Structured output parsing
- Working with user memory (core in companion AI)
- Ability to design modular systems

Deploy/host this assignment and submit the github link along with the hosted assignment link.

Deadline: **Reviewed on rolling basis**
